Migration Accelerator: The simplest way to migrate to RingCentral

Mitel and RingCentral have partnered to create a cloud migration process specifically for Mitel on-premise customers, providing an easier, faster, and more effortless path to the cloud than any other vendor can offer. Dedicated RingCentral teams make sure that this transition from Mitel’s on-premise PBX to RingCentral MVP (message, video, phone) solution is seamless, disruption-free, and fully supported, every step of the way.

Migrations do not have to be complex

Mitel recommends RingCentral as the exclusive public cloud provider for its customers because of its superior functionalities, flexibility, and scalability. Together, we understand that migrations can be complex and lengthy, but we are here to ensure that Mitel customers have a smooth and easy transition to RingCentral MVP. Mitel and RingCentral teams have curated an accommodating migration experience that is hassle-free for both customers and partners, fast (think hours, not days), accurate, and with minimal service disruption. The Migration Accelerator will take the guesswork out of understanding current Mitel on-premise infrastructure, providing the necessary user profiles, device configurations and calls flows – optimized for RingCentral MVP.
Migration Accelerator, an exclusive offering from this strategic partnership, significantly reduces the time required to migrate from Mitel PBX infrastructure to RingCentral MVP. This tool will discover user details, auto-create migration reports, enhance the data, and smoothly provision it within the RingCentral MVP solution. This results in a speedier migration with minimal dependency on your IT resources. No other migration approach ensures the highest level of consistency between your current Mitel system and RingCentral MVP.

**How does the Migration Accelerator work?**

- **Benefits of Migration Accelerator**
  - Purpose built platform by RingCentral and Mitel to migrate to cloud
  - Based on real-world customer migrations and deep engineering collaboration
  - Secure and non-invasive approach that does not require giving access to 3rd party vendors
  - API based approach that provides the highest accuracy of data migration

**The 4 easy steps to migrate from Mitel to RingCentral MVP**

1. **Audit**
   - Auto-discover Mitel PBX configuration details
2. **Capture**
   - Generate high-level report for customer and detailed report for RingCentral PS
3. **Enhance**
   - Enhance each user and device data to align with the customer needs
4. **Provision**
   - Automatic provisioning into RingCentral MVP
1. Audit

Owning a Mitel communication system does not mean you fully understand all of its intricacies. The first step is to audit your existing Mitel infrastructure so that RingCentral MVP can be configured properly. This can take days or potentially weeks’ worth of effort to manually consolidate this information. However, with the auto-discovery feature of Migration Accelerator, there is minimal reliance on your IT team or Mitel/RingCentral engineering team. Performing an audit can auto-discover all configuration details and reduce typical auditing time to just 1 hour for every 1000 users.

#### Auto Discover

- List of users and configurations
- Call Flow Settings
- List of Mac addresses for 6800/6900 phones
- Phone numbers to be transferred
- Hunt plans, hunt, and trunk group settings
- Handset types, Key press programming

2. Capture

Post Audit, Migration Accelerator will auto-create 2 distinct reports.

- **High level migration report** (HLD) - This report is intended to be leveraged by the customer for migration planning and identifying potential issues that could create any hassles throughout the transition process. Even in situations without engagement from RingCentral professional services, customers can use this report or work with their partner to plan the next steps in the migration.

- **Low level migration report** (LLD) - This report provides detailed configuration of the existing Mitel system, saving customers time and effort on data gathering. The data captured includes, but is not limited to:
  - User and device records
  - Hunt/Pickup/ring/ACD/Paging Groups
  - Schedules
  - Auto Attendants
  - Call Flows

  This report is intended to be leveraged by RingCentral Professional Services to save time on planning and design (P&D) phase for both parties, but still have this stage to allow enhancement and changes to the user configuration (if required).
3. Enhance

Once the detailed data is auto-discovered from the PBX systems and captured into an LLD report, it is then reviewed during the P&D process with professional services. As they work closely with both the customer and partner to understand business requirements and reflect those changes in the existing configuration and reporting, the professional services team would curate an elaborate LLD report that could be seamlessly integrated for auto provisioning.

4. Provision

Migration Accelerator has access to RingCentral APIs and in-depth SQL Schemas to automate the creation of users, accounts, and personalizations. The team would also use post capture and enhancements capabilities to build user accounts into the RingCentral MVP solution. All of these efforts would result in a speedier deployment, reduced downtime, and a preserved user experience.

One key thing to remember is that the Mitel 6800 and 6900 handsets are certified with RingCentral MVP, and the migration accelerator will provision existing Mitel phones. The benefit of users being able to continue using Mitel phones helps preserve their phone experience and enjoy faster deployment via zero-touch provisioning. This is unlike other cloud solution competitors that will require the replacement of your existing Mitel handsets, resulting in inconveniently delayed migration schedules.

Learn more about Zero Touch Provisioning here.
Migration Approach

To ensure your upgrade experience is as smooth as possible, the RingCentral Professional Services team will work very closely with you throughout the process. Below illustrates the Mitel to RingCentral Migration experience.

Migration Service Experience

Mitel On-premise

- Mitel phone profile extraction
- Mitel system/user configuration extraction

Mitel-to-RingCentral Migration Accelerator

- Call flow
- Settings
- Diagrams and configuration information describing the call flow components

RingCentral Implementation Services

- Auto attendant prompts
- With assistance from Professional Services, audio files will be uploaded to RingCentral MVP Service
- Transfer phone numbers
- RingCentral Professional Services team will coordinate with current service provider to manage number porting
- Phone migration
- A list of MAC addresses for 6800 and 6900 phones enables zero-touch provisioning to RingCentral MVP Service

RingCentral MVP
1. Basic Service

Businesses moving less than 100 users and that meet certain other conditions can take advantage of the self-service audit capability to move data from their Mitel on-premise system to RingCentral MVP. You will be able to effortlessly audit your existing infrastructure using Migration Accelerator. At the end of this analysis, Migration Accelerator will create a high level migration report.

At this point you are responsible for merging and transforming the data to feed into RingCentral MVP for automatic provisioning. Currently, in the early access program, the self-service migration capability is available at no cost* by request to the professional services.

2. Full Service

Organizations that want to be completely hands off with their migration, can also opt for the full service migration. This is well suited for customers migrating a large set of users, that include complex configuration across multiple physical sites, and teams that have limited resources to plan and manage the project. The full-service option is only offered through a paid engagement with RingCentral Professional Services. This dedicated team has successfully completed hundreds of Mitel to RingCentral MVP migrations and captured those learnings in a set of cloud migration best practices available to customers and partners.

Below illustrates the comparison between self-service approach and RingCentral Professional Services Engagement Model to help customers make the right decision.

Congratulations, you're now live!
